Western Cape Government

BETTER TOGETHER.

## Western Cape: COVID-19 and HIV / Tuberculosis

Mary-Ann Davies on behalf of the Western Cape Department of Health

## What predisposes to poor COVID-19 outcomes in South Africa?

Known risk factors from other settings
$\checkmark$ Older age
$\checkmark$ Male sex
$\checkmark$ Diabetes
$\checkmark$ Cardiac disease
$\checkmark$ Respiratory disease
$\checkmark$ Kidney disease
$\checkmark$ Liver disease
$\checkmark$ Overweight
$\checkmark$ Organ transplant
$\checkmark$ Recently diagnosed cancer
? Tuberculosis
? HIV

What predisposes to poor COVID-19 outcomes in South Africa?

Some risk factors for death may be linked to each other e.g. diabetes and overweight

Disentangle the effects of each individual risk factor
Need data on all these factors and COVID-19 outcomes

## Known risk factors from other settings

$\checkmark$ Older age
$\sqrt{ }$ Male sex
$\sqrt{ }$ Diabetes
$\sqrt{ }$ Cardiac disease
$\sqrt{ }$ Respiratory disease
$\checkmark$ Kidney disease
$\checkmark$ Liver disease
$\sqrt{ }$ Overweight
$\checkmark$ Organ transplant
$\sqrt{ }$ Recently diagnosed cancer
? Tuberculosis
? HIV

HIV

Western Cape routine public sector data to look at risk of COVID-19 death

Unique identifier used across all systems
Data brought together in Provincial Health Data Centre (PHDC)

## Western Cape routine public sector data to look at risk of COVID-19 death

Unique identifier used across all systems
Data brought together in Provincial Health Data Centre

## Data Beneficiation

 Inferring health conditions, visits and registers.

Comorbidities inferred from lab tests, medication received
> Diabetes
> Hypertension
> Chronic kidney disease
> Chronic respiratory disease/asthma
$>$ Tuberculosis
$>$ HIV
$>$ Not overweight/obesity; smoking; socio-economic status

Western Cape routine public sector data to look at risk of COVID-19 death

- Factors associated with COVID-19 death in all adult public sector patients $\mathbf{> 2 0}$ years of age (3.5 million patients "active" in the public health system)

## What are the chances of dying from COVID-19 for different risk factors?

| Patient characteristics | Adjusted <br> Hazard ratio | 95\% Confidence Interval |
| :--- | :---: | :---: |
| Sex | 1 |  |
| female | 1,40 | 1,$16 ; 1,70$ |
| male |  |  |
| Age | 1 |  |
| <40 years | 3,12 | 1,$88 ; 5,17$ |
| 40-49 years | 9,92 | 6,$34 ; 15,54$ |
| $\mathbf{5 0 - 5 9}$ years | 13,55 | 8,$55 ; 21,48$ |
| 60-69 years | 19,53 | 12,$20 ; 31,26$ |
| $\geq \mathbf{7 0}$ years |  |  |
| Non-communicable diseases | 1 |  |
| none | 4,65 | 3,$19 ; 6,79$ |
| diabetes well controlled (HbA1c <7\%) | 8,99 | 6,$65 ; 12,14$ |
| diabetes poorly controlled (HbA1c 7-9\%) | 13,02 | 10,$06 ; 16,87$ |
| diabetes uncontrolled (HbA1c $\mathbf{\geq 9 \% )}$ | 3,34 | 2,$39 ; 4,68$ |
| diabetes - no measure of control | 1,46 | 1,$18 ; 1,81$ |
| hypertension | 2,02 | 1,$55 ; 2,62$ |
| chronic kidney disease | 0,98 | 0,$75 ; 1,30$ |
| chronic pulmonary disease |  |  |
| Tuberculosis | 1 |  |
| never tuberculosis | 1,41 | 1,$05 ; 1,90$ |
| previous tuberculosis | 2,58 | 1,$53 ; 4,37$ |
| current tuberculosis |  |  |
| HIV | 1 | 2,$09 ; 3,61$ |
| negative | 2,75 |  |
| positive |  |  |

## What are the chances of dying from COVID-19 for different risk factors?

How much are these factors contributing to COVID-19 deaths in WC? For every 100 people in the public sector who have died from COVID-19 - we can attribute as follows:

## Standardized mortality ratios (SMR)

actual number of COVID-19 deaths in people with HIV
vs. expected number of COVID-19 deaths in people with HIV
if their age- and sex-specific COVID-19 risk of death was the same as in people without HIV

SMR for the increase in COVID-19 death in people with vs. without HIV in Western Cape 2.33 ( $95 \%$ CI: 1.83-2.91)

Across public and private sector, about $8 \%$ of COVID-19 deaths due to HIV.

## Conclusions

- Older age and comorbidities increase risk of COVID-19 death
- Quantify effect of HIV \& TB:

Modest 2 - 2.5 times risk of COVID-19 death associated with HIV and TB

- May be over-estimated if haven't fully disentangled all comorbidities \& risks
e.g. overweight and socio-economic status.
- Those with HIV \& TB tend to be younger where overall risk of COVID-19 death is low.
- < $10 \%$ of COVID-19 deaths in our population due to HIV
